The value in my string is like this: 09.02.2017 10:39:59 In this string the input is always the date, the hour, the

minute and the second. I wrote this code: @`{ string date = "09.02.2017 10:39:59"; string[] split = date.Split('.'); int year = Int32.Parse(split[0], System.Globalization.NumberStyles.Number); int month = Int32.Parse(split[1], System.Globalization.NumberStyles.Number); int day = Int32.Parse(split[2], System.Globalization.NumberStyles.Number); int hour = Int32.Parse(split[3], System.Globalization.NumberStyles.Number); int minute = Int32.Parse(split[4], System.Globalization.NumberStyles.Number); int second = Int32.Parse(split[5], System.Globalization.NumberStyles.Number); }` I think I can omit the `System.Globalization.NumberStyles.Number` because the documentation says it's only for parsing numbers. But I think something is wrong with the way I'm parsing the digits because when I try to parse the day, it throws an exception: `int date = Int32.Parse(split[2], System.Globalization.NumberStyles.Number);`
